

Tension in left arm

Sling too tight

Excessive cheek pressure

Excessive shoulder pressure

(Shoulder too tense)

Breathing Incorrectly

Only release trigger after you have totally exhaled and have a perfect sight picture

Left elbow too far out

Pressure from left thumb

Natural position aligned to right of target

Left elbow too far under the rifle

Pressure from left fingers

Natural position aligned to left of the target

Canting to the left

Possible loose sling

Error Diagnosis Guide

By Nigel Porter

Electronic re-creation
of Nigel's work

Canting to the right

Excessive right hand grip

Trigger snatch

Possible loose sling

Hollow Group focus on the foresight not the target

Physical effort may be forcing sights up onto target.

Butt too high in shoulder

Possible loose sling

Canting to the left and the right

Physical effort may be forcing sights down onto target

Butt too low in shoulder

Sling too tight

Before shooting an NSRA (10 Spot) target it is vital to:

- ◆ Ensure your position and set up is perfect
- ◆ Follow all marksmanship principles
- ◆ Correctly zero in your rifle
- ◆ Fire enough sighting shots to relax into position

(Remember it can take many sighting shots before you are relaxed and able to shoot consistently)

Remember (ACUR)
Anti Clockwise for Up
& Down

Anschutz Sight

Perfect Sight Picture

Rear Sight

Foresight & Target

Notice the white areas within the sight picture, they are all equal to a third the size of the last ring

Marksmanship Principles :

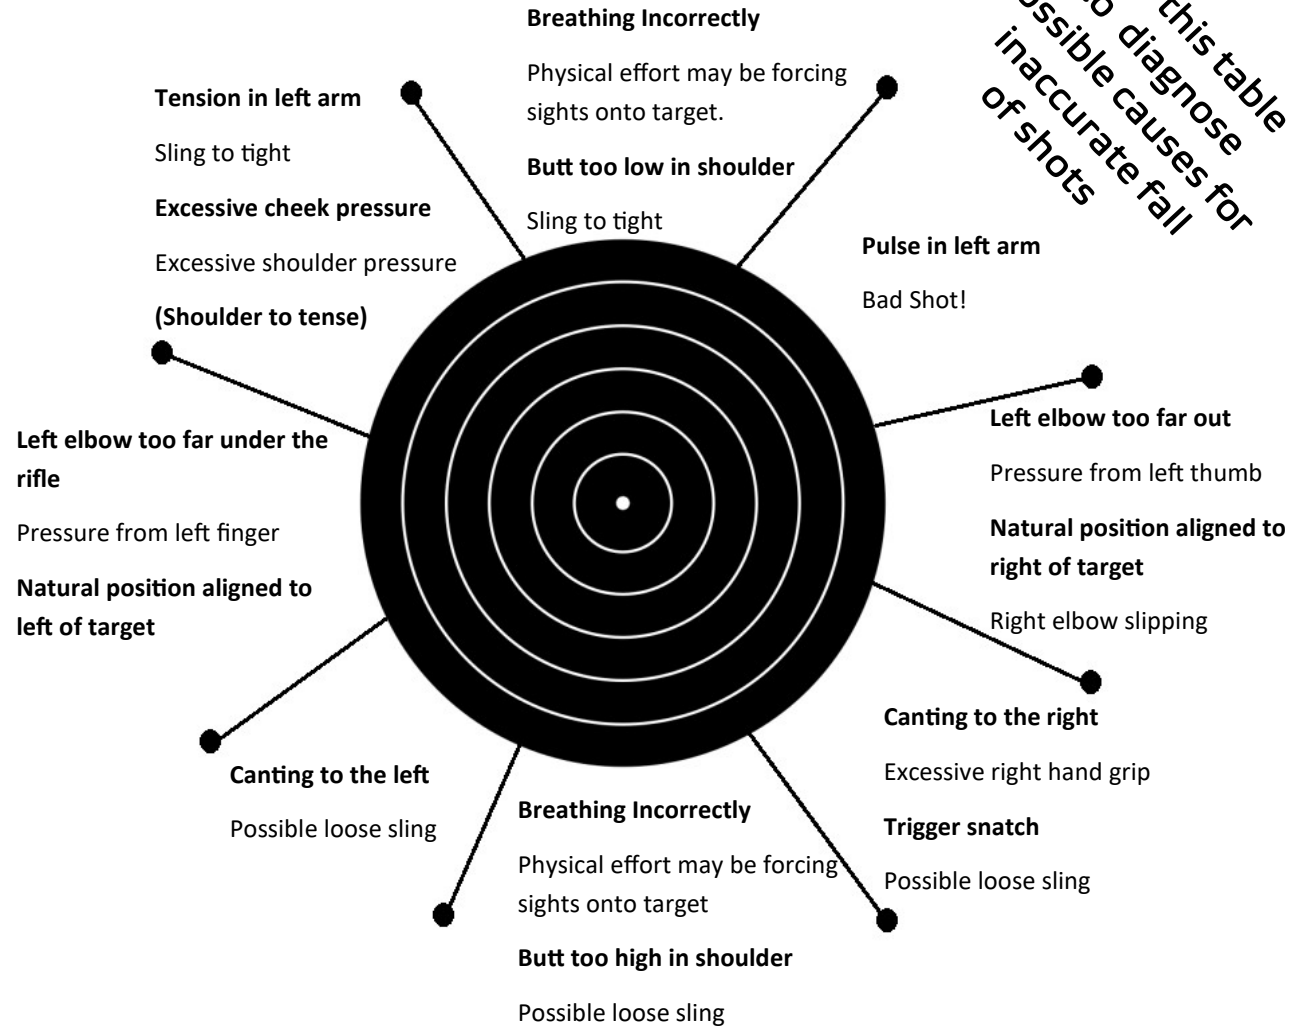

1. Your position and hold **Must** firm enough to support rifle.

2. The rifle **Must** point naturally at the target without any physical effort

3. Both Sight Alignment & Aim, **Must** be correct

4. The shot **Must** be released & followed through without disturbing the position or sight alignment

Use this table to diagnose possible causes for inaccurate fall of shots

Remember Inconsistency Is The Demon For Any Stray Shot
